Manage individual or multiple sites from any location.

Back to Base monitoring of all alarms via PSTN, GPRS or IP

Control entry and exit gates with time management and detailed reporting

Monitor alarms in individual units and offices.

Control lighting and air conditioning

In today's increasingly uncertain environment, building monitoring and access control are critical to the protection of yours and your customers assets.

Safeguarding against theft, fraud and the safety of your personnel are paramount. You need to ensure you have taken every precaution to protect your company, your staff, and your customers, yet maintain full control of your premises and security.

Genie has the answer. In a simple to use software package, Genie will provide you with all your security and access control needs.

Genie for Self Storage provides an easy way to manage your Storage Unit site. By integrating Genie with industry leader, StorMan Self Storage Software, you can have the best of both worlds.

Simple setup quickly establishes unit holders access in Genie. Data exported from StorMan is automatically processed to update user access at your site.

History logs are exported to StorMan for viewing through the StorMan User Interface.

The additional features offered by Genie, and Genesis hardware, can be used to provide a complete solution for all aspects of your site security.

Fully designed and owned in Australia, support is readily available from online help, manuals, FAQ's and direct email assistance.

Ease of Installation

Utilities and templates provide the basis for programming units in Genie. By following a few simple steps, establishing access rules and adding units is very quickly achieved.

Ease of Use

Wizards provide a quick and easy way to navigate Genie. Access details imported from StorMan are read-only to protect user and unit data integrity.

Alarms, History and Archives

Alarms relating to units are forwarded to StorMan for processing through their established actions. Alarms are also recorded in Genie for cross checking and generation of Archive reports.

CCTV

Supports integration with new or existing CCTV installations.

Online Help

Extensive context sensitive help and online manuals give examples and explanations throughout the system.
