

Basic Marine Security Setup

Wireless Receiver and alarm panel with dialer

Sirens and strobes

Up to 50 Metres

Wireless Motion Sensors to protect boat and personal watercraft

Marine Security (Wireless Detectors)

- Advantages of Dash Symons Systems Marine Security
 - The motion sensors detect movement instantly and alarm.
 - Because the devices are wireless, even if your vessel is towed away and there is no movement to be seen, an alarm is triggered as soon as they step out of range.
 - The alarm can be programmed to send alarm messages directly to your mobile, or a monitoring station of your choice.
 - System is easily activated and deactivated from the 2 included remotes or the keypad.
 - Wireless motion sensors can also be incorporated with most* existing alarm panels, to save on cost.
 - If incorporated with your home alarm your vessel can be armed at all time while still leaving you free to move around your home.
